COVID-19
Information for Healthcare Providers
NOVEL CORONAVIRUS DISEASE: COVID-19

The novel coronavirus disease (COVID-19) is a new virus of global health significance caused by infection of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). On March 11, 2020, the World Health Organization (WHO) declared COVID-19 a global pandemic.

TRANSMISSION AND SYMPTOMS

According to the U.S. Centers for Disease Control and Prevention (CDC), COVID-19 is thought to spread from person to person in close contact through respiratory droplets. It is also possible that a person can catch COVID-19 by touching a surface or object that has the virus on it.

The CDC reports that some or all of the following symptoms may appear up to 14 days after exposure:

- Fever
- Cough
- Fatigue
- Anorexia
- Shortness of breath
- Sputum production
- Myalgias

DIAGNOSTIC TESTING FOR COVID-19

BioReference offers a real-time reverse-transcription polymerase chain reaction (real-time RT-PCR) assay, giving healthcare providers accurate and timely test results to ensure greater access to testing, promote earlier diagnosis and help limit the subsequent spread of infection. The test detects the presence of SARS-CoV-2 and is for use with patients who meet current guidance for evaluation of infection with COVID-19.

The test has been made available pursuant to the US Food and Drug Administration (FDA) Emergency Use Authorization (EUA) for diagnostic testing in CLIA Certified high-complexity laboratories. The test has been validated, and is being performed at BioReference.
Please refer to the ICD-10 Coding Guidelines for more information on coding encounters related to 2019 novel coronavirus (COVID-19).

GUIDANCE FOR TESTING
The CDC has released criteria for healthcare providers for the evaluation of patients under investigation (PUI) of COVID-19. As of March 4, 2020 recommendations include testing for a wider group of symptomatic patients. Providers should use their judgment to determine if a patient has signs and symptoms compatible with COVID-19 and whether the patient should be tested. Decisions on which patients receive testing should be based on the local epidemiology of COVID-19, as well as the clinical course of illness.

Please refer to the most current CDC guidelines for further information. www.cdc.gov/coronavirus/2019-ncov/hcp/clinical-criteria.html

Healthcare providers should notify their local or state health department immediately in the event of a patient under investigation for COVID-19.

COLLECTION INSTRUCTIONS
Patients under investigation of COVID-19 and seeking evaluation of the disease will not be collected at BioReference Patient Service Centers. Specimen should be collected at physician offices, hospitals or other clinic settings. As of March 24, 2020, the FDA and CDC recommend collecting and testing an upper respiratory specimen with a nasopharyngeal collection (NP), as the preferred choice for swab-based SARS-CoV-2 testing. If a NP specimen cannot be collected, alternate collection sites are acceptable and detailed below. Refrigerate specimen at 2-8° C. Label with patient name. Place in specimen bag and label with “COVID-19” and submit to laboratory.

Flocked plastic NP swabs in universal or viral transport media (UTM/VTM) at 3 mL volume are preferred. The FDA has made alternative recommendations in the context of limited quantities of testing supplies during this public health crisis, based on the best available evidence and in consultation with outside experts. When considering alternate swab types, use only synthetic fiber swabs with plastic shafts,
The COVID-19 assay provides you with accurate and timely test results to provide proper care and reduce subsequent spread of infection.

STANDARD PROCEDURES FOR NASOPHARYNGEAL COLLECTION

1. Tilt patients head so nasal passages are parallel to the palate.
2. Insert a swab into nostril. Leave the swab in place for several seconds to absorb secretions.
3. Slowly remove swab while rotating it.

## TEST DETAILS

| Test Code and Name: | TH68 Novel Coronavirus COVID-19 Nasopharynx  
|TH69 Novel Coronavirus COVID-19 Oropharynx  
|TH71 Novel Coronavirus COVID-19 Pooled N/NP/OP |

### Primary Container:
Dacron-tipped plastic swab with universal transport media *(Speedy # 510)*

- M6 MicroTip Flock Swab
- M4 MicroTip Flock Swab
- M6 Universal Flock Swab
- Star Swab

### Alternate Container:
Swab Viral Culturette *(Speedy # 509)*

### Turn Around Time: 
3 Days

### Transportation Temperature:
Refrigerate (2-8˚ C)

### Stability:
3 Days (Refrigerated) 30 Days (Frozen)

### Methodology:
Real Time RT-PCR

### Reference Range:
Not Detected

### Result Comments:
- **Positive 2019-nCoV** – Critical.
- **Presumptive Positive 2019-nCoV** – Critical. The viral concentration is likely to be near or below the limit of detection. Re-collection of a new sample is suggested, if clinically indicated.
- **Inconclusive** – Please consider re-collection of a new specimen, as clinically indicated.
- **Invalid** – Please consider re-collection of a new specimen, as clinically indicated.
- **Not Detected** – Please consider re-collection of a new specimen, as clinically indicated.

### Collection Instructions:
Patients under investigation of COVID-19 and seeking evaluation of the disease will not be collected at BioReference Patient Service Centers. Specimen should be collected at physician offices, hospitals or other clinic settings. As of March 24, 2020, the FDA and CDC recommend collecting and testing an upper respiratory specimen with a nasopharyngeal collection (NP), placed in 3 mL of transport media, as the preferred choice for swab-based SARS-CoV-2 testing. If a NP specimen cannot be collected, alternate collection sites are acceptable. Refrigerate specimen at 2-8˚ C. Label with patient name. Place in specimen bag and label with “COVID-19” and submit to laboratory.

### AOE:
- **Source:**
  - Oropharyngeal
  - Nasopharyngeal

### Self-Pay Price:
$100

### CPT:
U0003**

### Clinical Utility:
For the detection of the novel COVID-19, Coronavirus
