December 2021 - StormPath Tech Only Digital Immunohistochemistry

Page 1 of 1

Dear Valued Client,

GenPath is excited to announce the transition to an enhanced hardware and software system for digital pathology immunohistochemistry (IHC) scanning on December 5th. **The combined system of Leica (hardware) and Gestalt (software) will improve speed, quality and reliability in digital IHC.**

This system enhancement only affects the digital IHC component of Stormpath and replaces the Ventana Virtuoso system. There are no changes to test codes. The GenPath Oncology Commercial Team has been actively demonstrating the new system over the past few months.

Please contact your dedicated Account Representative with any questions. For any issues that arise, you can also connect with Stormpath Support at StormSupport@BioReference.com.

Best Regards,

The BioReference | GenPath Team
